Cable Locating

MCN Cabling employs top of the line cable locating equipment to ensure that all cable locations are right on target. Using the Radiodetection RD8000 with GPS compatibilities, MCN can provide digital mapping each item located. With the ability to locate a variety of different lines through the ground, using the RD8000 ensures that MCN can provide a fast and cost efficient service in almost any environment, and a large variety of terrain.

The RD8000 can be used to locate many types of items that may be found at many sites. Some of which include, but are not limited to:

- Fiber Optic Cabling
- Copper Wire or Cable
- Power/Electrical Lines and Cabling
- Metal Pipes

By using the Radiodetection RD8000, MCN is able to use tools inherent to the system to provide accurate and fast reports right from the location site. Using ServeyCERT (tm), which is a program within the RD8000, MCN is able to pass on survey information for analysis, store and re-view location data and records, and easily upload information gathered to PDA or PC via Bluetooth.

MCN is able to ensure that the RD8000 is always calibrated to the original factory calibration, and is able to print and issue a validation certificate without losing time sending the equipment into a service centre.

MCN is a full service network and telecommunications company that is capable of handling all of your corporate telecommunication needs. When an emergency arises our response crews are ready to roll out on the shortest call out time in the industry twenty four hours a day seven days a week three hundred and sixty five days of the year. Based out of Saskatoon, Saskatchewan MCN is there to provide the best service in all locations across Western Canada.
